Summary

Backend Software Engineer with 4 years of experience building and maintaining production backend systems using Java, Spring Boot, PostgreSQL, and REST APIs. Experienced in developing business-critical features, optimizing application and database performance, implementing authentication and integrations, performing database migrations, and troubleshooting production issues. Hands-on experience with AWS, Redis, Docker, Liquibase, Hibernate, SQS, and multi-module Spring Boot applications.

Skills

Languages

Java, Go, PHP, SQL

Backend

Spring Boot, Spring Security, REST APIs, JPA/Hibernate, JMS, Quartz

Databases

PostgreSQL, MySQL, MongoDB

Caching & Messaging

Redis, AWS SQS, JMS

Cloud & Infrastructure

AWS (S3), Docker, Docker Compose, Ansible

Database Migration

Liquibase, Flyway

Authentication & Security

Auth0, OAuth 2.0, Role-Based Access Control (RBAC)

Build & Version Control:

Gradle, Maven, Git

Development & Deployment

CI/CD, GitLab Runner, Linux, Production Debugging

Architecture & Engineering

Backend Architecture, Microservice-style Components, Database Design, Performance Optimization, API Design, Troubleshooting & Root Cause Analysis

Experience

REYRIE GLOBAL

Software engineer

Thiruvananthapuram

February 2026 - Present

- Developed and maintained backend applications using **Java, Spring Boot, PostgreSQL, Redis, AWS, and REST APIs** across food-delivery and programmatic advertising products.
- Owned the **FamilyMeal Order Edit** feature, implementing eligibility rules, time-based restrictions, edit limits, validation, and operational notifications.
- Developed **DXKulture** backend features for demand partners, deals, compliance, creatives, inventory, and reporting workflows.
- Optimized order and restaurant listing APIs by removing an unnecessary ORM/database join, reducing response time from **~2s to ~300ms (~85% improvement)**.
- Implemented **Auth0 authentication**, including SPA/M2M flows, token validation, session management, and Redis-based token revocation.
- Modernized **PostgreSQL/Liquibase** schema management across 376 tables and 1,300+ changesets; upgraded the platform from **Spring Boot 3.2.1 to 3.5.16**.
- Integrated **AWS SQS/S3**, Docker, and CI/CD, while investigating and resolving production issues across application, database, infrastructure, and external service integrations.
- **Collaborated across development, testing, code reviews, and deployments**, taking ownership of features and production issues from requirement analysis through implementation and release.

SMART HMS

Systems engineer

Thiruvananthapuram

June 2022 - February 2026

- Designed and delivered **Java/Spring Boot backend services** for HR and Payroll systems covering employee lifecycle management, payroll processing, leave workflows, role-based access control, validation, exception handling, and REST API development.
- Developed modular, microservice-style backend components using **Java and Spring Boot**, integrating **MySQL and MongoDB** based on application and data-access requirements.
- Containerized backend services using **Docker** and integrated **AWS S3** for secure document storage and AI-processed artifacts.
- Contributed to large-scale **Hospital Management Systems using PHP/Symfony**, working across patient, billing, HR, inventory, reporting, and other backend workflows.
- Led a team of **3–5 developers**, conducting code reviews, supporting sprint planning, coordinating development activities, and ensuring timely feature delivery.
- Managed application deployments and release activities using **Git and Ansible**, while handling production troubleshooting and deployment-related issues.

<> Projects

FamilyMeal – Food Ordering & Delivery Platform

Food ordering and delivery platform supporting meal ordering, order management, payment, and delivery workflows.

Tech: Java, Spring Boot, PostgreSQL, Docker, JMS, Quartz, Stripe, REST APIs

- Owned the design and implementation of the **Order Edit** functionality, including eligibility evaluation, time-based restrictions, edit limits, and validation.
- Integrated **Slack notifications** for order-edit events and operational visibility.
- Investigated production issues and optimized backend/database operations to improve reliability and response times.

DXKulture – Programmatic Advertising & Ad-Tech Platform

Programmatic advertising platform supporting demand partners, creatives, deals, inventory, compliance, reporting, and advertising workflows.

Tech: Java, Spring Boot, PostgreSQL, Redis, AWS, Docker, Liquibase, Auth0, REST APIs

- Developed backend services for **demand-partner, deal, creative, compliance, and reporting workflows**.
- Implemented **Auth0 authentication**, Redis-based token revocation, and SPA/M2M authentication flows.
- Performed PostgreSQL schema modernization using **Liquibase**, establishing a baseline across 376 tables and validating 1,300+ changesets.
- Upgraded the platform from **Spring Boot 3.2.1 to 3.5.16**, including Spring Security API migrations.
- Diagnosed production issues involving **Spring Boot, PostgreSQL, Hibernate, Redis, AWS, Docker, and external services**.

🎓 Education

UKF College of Engineering and Technology

Electrical and Electronics Engineering

Bachelor Of Technology

Thiruvananthapuram • August 2016 - August 2020
